Test results Monday 20th July_ FW: Updated comments RE: CSV upload / errors

Ingrid Anderson <ia@itinium.co.uk>
To: Andreas Poole <andreas@aiguys.ltd>

Hi Andrea

I don't want to send through too much at one time as otherwise it may get confusing. Here are my results so far today. If you wish to discuss please let me know, happy to do so.

Will wait to hear from you.

Kind regards

Ingrid

Testing results – Monday July 20th – csv uploads on import template 7

JOB-0726-00006

Please remove the writing

Once submitted can it please take them back to their dashboard.

I notice that once submitted we are now showing dept as unknown (perhaps caused by v7 of csv upload?)

- Can this please be added or drawn through from the users log on – 90% of the time this would be the same so a tick box to confirm that there is no change of please make any ar

Perhaps as a site is being set up these are standard details that need to be set up by myself? Could we have a 2 boxes one form contact one for telephone number and then this duplica

- Good news the total PB content is correct.

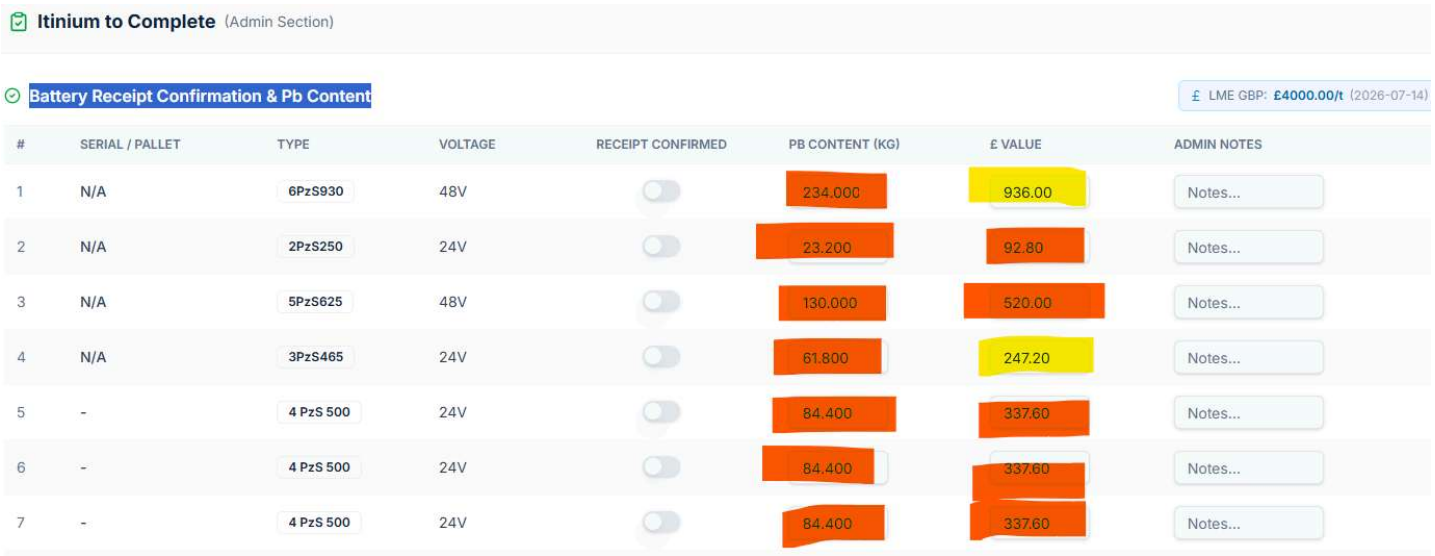

However

The **Battery Receipt Confirmation & Pb Content**

Is incorrect, mixed bag here

Incorrect figures

Correct figures **– for Pb content not value**

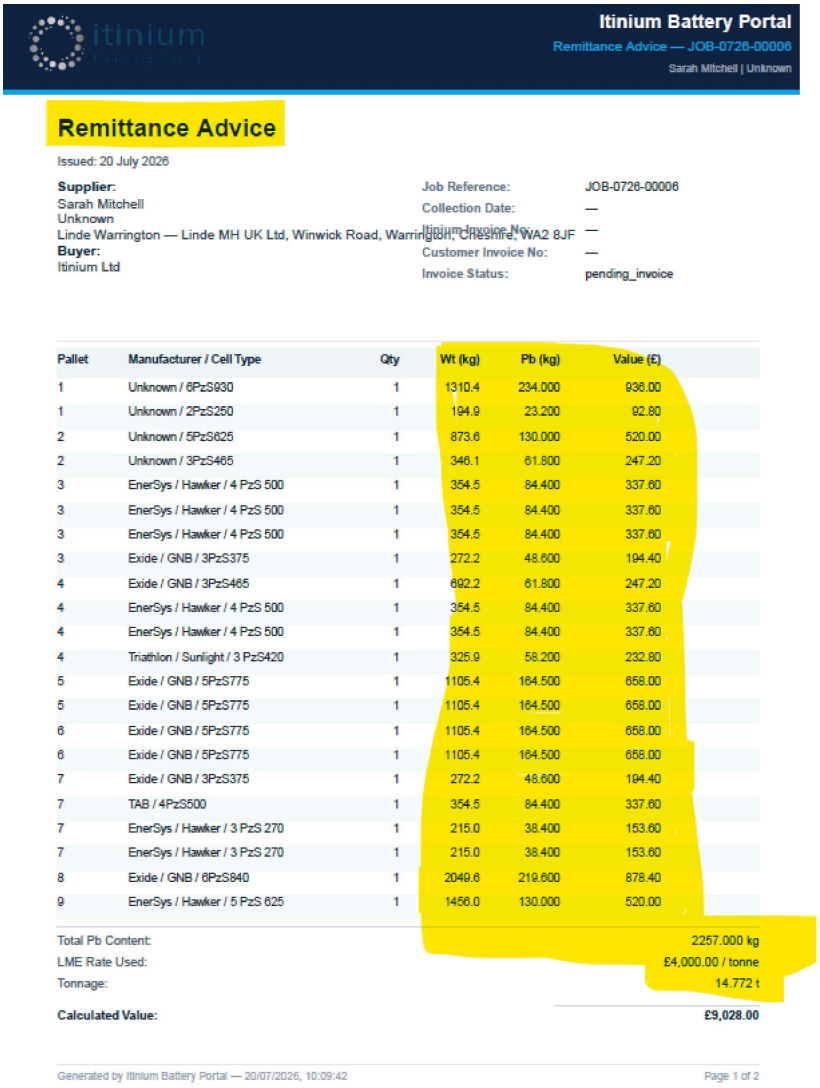

I can not seem to be able to progress this request any further ? please explain where and how I can add a date?

Remittance sheet – can this document please be changed to Confirmed Collection sheet.

It needs to show similar details to the Collection sheet and we also need to have the ability to have notes, just in case for example Pallet 1 they think they have sent a 48v 6PzS930 but v

It just needs total value at the end.

Thanks Andreas,

I've just sent across todays test notes. I'm not sure but I think something on the (6) version is perhaps not allowing weights to calculate correctly.

Speak Monday.

Kind regards

Ingrid

Hi Ingrid,

I have deployed further updates following our discussion this morning.

I just ran a quick test and found that the vast majority of rows are now automatically resolving. Only the rows with a missing manufacturer are still being flagged.

Best,

Andreas

Hi Ingrid,

Thanks for sending this over. I have made similar observations and am currently working through the development changes.

Once I have applied these updates, I think it would be helpful to give you a call during the next test run. Would in about an hour or so work for you?

Best,

Andreas

Hi Andreas

I've started testing and getting much further. I haven't tested weights / value calculations yet as just wanted to get the flow of job upload working. These are my observations s
below makes sense to you, I'm at the end of a phone if you have any questions.

Test 1 STILL - fell over today due to loose cells –tried to resolve but without success - I've saved as a draft – we can discuss later on, but feel that we need to get csv working first

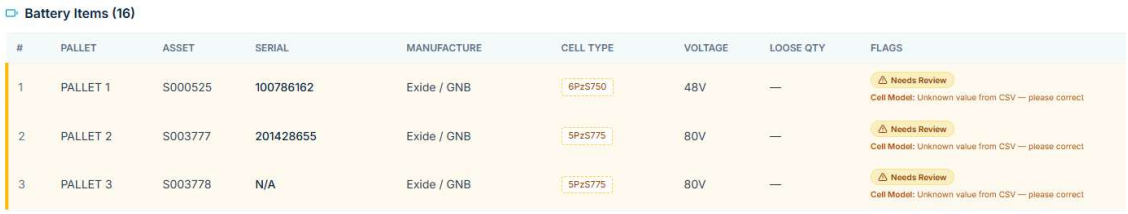

Test 2 – same upload but I deleted the loose cells once uploaded, submitted and it worked. The job ref- good but is there a way to include the month as well. This we use as a q

Depot – it pulls through unknown; would this not be Still-Exeter?

Battery Items

6 items were flagged – if I take pallet 1 as the example it is saying cell model unknown, however this is the correct cell ref.

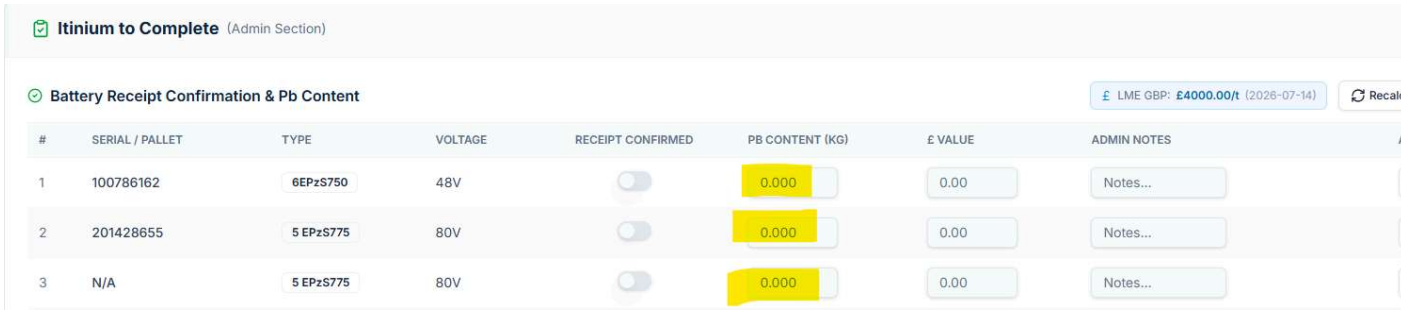

I resolved but as you can see it seems temperamental – 1st example has no space, 2nd would only work if I put a space – can we please iron this out.

The ideal solution is that look up in column A (Derek's s/sheet) then match to manufacturer and populate with manufacturers unique reference.

Itinium to complete

Once "error corrections" have been made the Pb weight is still not pulling through, tried the recalculate all with no effect.

Pb issue here.

The Remittance – can this please be adapted to something along the lines of below and headed Collection Sheet. This is the information that gets sent to the transport compan details but we will need a placed for the Special / loading instructions etc.

Collection sheet

- The CSV upload – this still needs to be moved to a more prominent position, not having to scroll down to it. Under the collection point would be better we feel.

Manual input -

- Wording in red to be changed to -

This load is currently under 10 tonnes, so a transportation charge will apply. For clarification or assistance please contact the Itinium team.

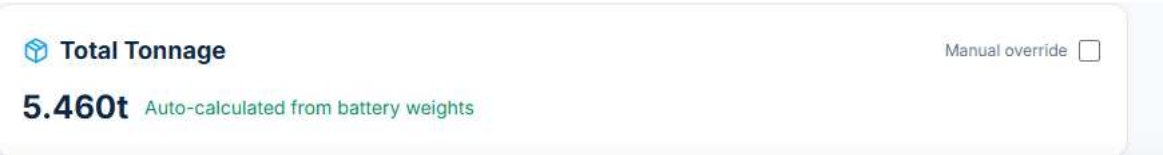

If you look at the first example on the portal – Still – this was created from a manual input.

- From 1st example at the top of the list – Still Exeter- This was manual entry not csv uploaded entry. The weight calculations are incorrect.

  8 batteries are shown but it is only calculating for 7 - (20 x 39.00kg -5460t)

  The correct weight (6240) should then by multiplied by 1.4 to give a total tonnage of **8736**t. This is the figure that should be in the box below and above.

  This is the correct safe loading weight for vehicles.

- The green writing on the Cell Type can be removed as well as the wording / Cell Model

-

CSV input –

Still not updating tonnage.

There is an ease-of-use issue with regards to tabbing across, but we can discuss this on Wednesday.

I am unable to test tomorrow as out at a meeting all day.

Many thanks and kind regards

Ingrid

Hi Ingrid,

The issues you highlighted yesterday have been addressed, and the republished app is now ready for testing.

I am heading out for my daughter's school awards ceremony, so I have not yet done a thorough QA check myself. However, I have shared a testing list with Jordan, one of our de of days.

I will let you know if anything else comes to light during this process and keep you updated on any required fixes.

Best,

Andreas

Hi Ingrid

Great to hear from you. I'm looking forward to getting this project moving again.

Thanks for flagging these CSV issues. I'll look into all five points right away, including moving the upload button and handling the voltage data.

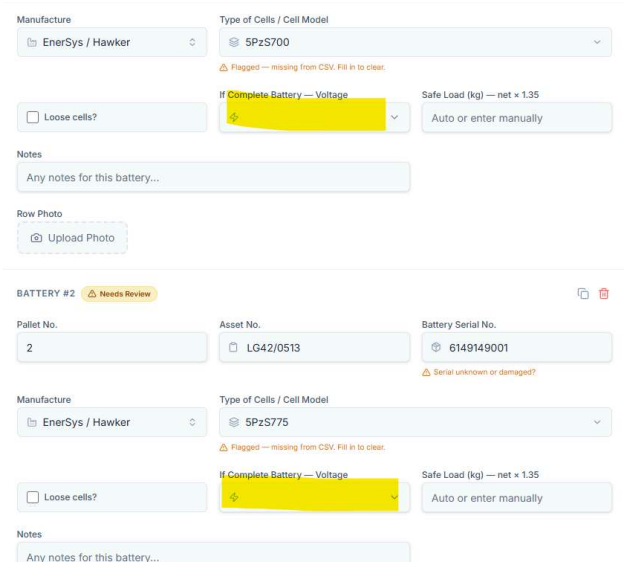

Based on the feedback you sent, these are all very easy fixes. I'm confident I'll patch all of these up by the end of today so you can continue testing from tomorrow. As soon as that have been made.

Best,

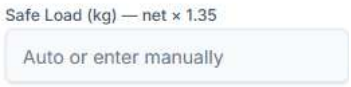

Andreas

4. The box for Safe Load does not need to be shown to the customer but needs to be behind the scenes, we don't want the customer seeing this.

The total weight is what the customer (and us) are interested in at this stage

5. Serial number box – does not need to be flagged if S/N is unknown.

Many thanks and kind regards

Ingrid
